

EXTREME DROUGHT

© Michael Franz Whitby

When green cities restart blooms in the desert of life
What is the populous going to say?
Because in the beginning, deserts too had water
Maybe they will say: "We have helped conserve our worldly environment...
...so all that precious water resources will aid desert gardens growth"

As far as one can image geographically
A refreshing balance of water sits close
In challenging environments there's water, just deeper
If one can see the sun, then water challenge is not impossible
Because inspiration creates room for answers
That's why water tastes are different
All based on location in depthness'

Some people believe attainment of good usable drinkable water
Comes from that 'squeeze - pull - push out more' theory
With acclamation that water is dirt cheap
A sad and very wrong chemistry move
But maybe enough to wake-up the humans' asleep of Planet Earth

When breaking news of water true cost becomes apparent
Populations will view this truth in a completely new way
Like the big blue, big green - most colourless big plan
Eyeballs filled with tears!
Will come to thy rescue in water formation
Humans better get ready for a rebound in water applications
All households' will require one...
...the water survival kit!
For providing water while protecting the environment
So we can all rejoice water today, more flow tomorrow

Water is at that tipping point
A revolution is on its' way, because humans know:
'Water does more than just keep humans alive'
Billions of inhabitants' cannot exist without that most precious
As we all await...
...when green cities restart the blooms in the desert of life

*Extreme: We haven't seen anything yet!
Extreme Drought!*
