

A NEW ERA

Michael Franz Whitby

Can Earth's inhabitants save this world we know?

Our global insurance program consists of expanding hope

With the revisit and reintroduction of straight talk

Connecting the thoughts of humanity

Through human understanding and experiences to actually getting there
Imagine the world's best together

That would be the coming of the awakening

As majority aide without the normal constraints

A new evolutionary world will arrive in eye sights

The world confidently filled with innovative new thinkers

Normally to attain such presence could still not be totally complete

But with this switch in grassroots thinking, saving our world is made possible

To truly save our world we bypass the mentor of one...

embrace organized echoes by the many

Recharging our world is a must - our world is out for justice

Taking from all alternatives for success

The world's largest incentives - us - the inhabitants

A wealth of goodness could help the cause

As we forget short-term wants more towards long-term needs

Isn't it time we get tough on ourselves?

Systematic changes with comfortable ideals for all humanity

Humans of this world are for the challenges

Betterments without borders

Just infrastructural and constructural thinkings'

Opportunities of another day - another success

As heavenly zodiac remain fully intact

Great future question: what are the polluters going to do?

Pay more because they emit the most

There are big roles ahead - involved volunteers are needed

The control to do better is our power...

...because our environment is one with our ecology

By sea or by shore - come join our team!
